EXECUTIVE SUMMARY

Computer Science Engineering graduate (2025) specializing in scalable Python FastAPI backends, Generative AI / LLM pipeline integration, and modern web software. Demonstrated engineering discipline across 37+ GitHub repositories, RESTful API architecture, database schema optimization, and Docker containerization.

TECHNICAL COMPETENCIES

? Languages: Python (Expert), C++, JavaScript (ES6+), SQL, HTML5/CSS3
? Frameworks: FastAPI, Node.js, Express, React, SQLAlchemy, Streamlit, LangChain
? AI & ML: OpenAI API, LLM RAG Pipelines, Prompt Engineering, OpenCV, Vector DBs
? Databases & Caching: PostgreSQL, Redis, SQLite, Database Indexing & Query Profiling
? Cloud & DevOps: Docker, AWS (S3, EC2), Git, GitHub Actions CI/CD, Linux CLI

FEATURED PROJECTS

1. ADCB Card AI Intelligence Platform (Python, FastAPI, OpenAI API, Docker)
? Engineered an intelligent credit profiling engine querying card reward metrics and approval limits dynamically using LLMs and RAG pipelines.
? Designed async API endpoints with sub-60ms response latencies.
2. YouTube Video Summarizer & Transcript Pipeline (Python, Streamlit, LangChain)
? Built automated transcript extraction and LLM summarization pipeline.
? Delivered structured executive bullet highlights from multi-hour video lectures.
3. Social Media Scalable RESTful API (Python, FastAPI, PostgreSQL, JWT Auth)
? Production-grade RESTful API featuring JWT authentication, password hashing, transactional post handling, and Pydantic request validation middleware.

EDUCATION

Bachelor of Technology in Computer Science & Engineering (2021 - 2025)
Focus: Data Structures & Algorithms, OS, DBMS, Software Engineering, AI/ML
